EXPERIENCE

Software Engineer Intern

Netflix - AdTech

May 2025 – August 2025

Los Gatos, CA

- Designed and deployed complete audit logs for tracking changes to more than 15 tables of business entities
- Created Java microservice transforming gRPC data and providing federated GraphQL endpoints to 5+ teams
- Collaborated with 7 different teams, creating data pipelines to fit their use cases and database structures
- Added 8 actionable metrics to ad deals allowing campaign adjustment to maximize performance per dollar

Student Researcher

Future Data Lab @ UCF

July 2024 – May 2025

Orlando, FL

- Extracted sub-graphs of transaction data from the blockchain with RPC APIs written in python
- Analyzed transformations of graphs over time to identify emerging patterns with grad students

Software Engineer Co-op

Lockheed Martin

June 2023 – May 2025

Orlando, FL

- IRAD Advanced Algorithms development with MATLAB and C++, reducing runtime by 64%
- Designed and integrated 5 embedded software tests in C for the code on the aircraft
- Implemented over 20 features for C++, C#, and python GUI applications used by integration team while streamlining their processes by 50%

PROJECTS

Systema (Hackathon Win) | Devpost | *ElevenLabs, Gemini, Typescript, React, Next, Postgres*

- Architected and built an AI-powered system design interview platform with a canvas, conversational agent, and grading engine, that provides consistent, rubric-based feedback across 5 core engineering dimensions
- Engineered a dynamic, context-aware AI interviewer by streaming real-time diagram state from a React canvas to an ElevenLabs agent, enabling a 100% automated interview with relevant follow-up questions

Cruise Connect | thecruiseconnect.com | *Typescript, React, Node, Express, MariaDB, Docker, AWS*

- Developed social media web app to help people meet before their cruise departs
- Applied docker containerization of the application, enabling seamless AWS deployment and cutting development cycle time by 54%, while enhancing scalability and reliability of the system
- Built ground-up user creation and authentication to learn hands-on secure login processes

CV Alarm | GitHub | *Python, PyTorch, OpenCV, PyGame*

- Built, and actively use, an open source alarm application that uses live webcam feed and a PyTorch model to prevent accidental oversleeping by ensuring the user is physically out of bed (no snoozing!)
- Fine-tuned a ShuffleNet CNN model on a custom-collected image dataset of 200 images collected over 5 minutes, and achieved 99.6% accuracy in detecting whether a user was in bed

Uni-Ledger | GitHub | *HyperLedger Fabric, Docker, Typescript, Node, Express*

- Designed a proof-of-concept blockchain solution to address vulnerabilities in centralized degree verification, such as perpetual record integrity and reducing verification costs by an estimated 44%
- Deployed TypeScript smart contracts to manage the full lifecycle of academic records, exposed CRUD functionality through a Node.js and Express REST API ensuring security compliance

EDUCATION

University of Central Florida

Bachelor of Science in Computer Science, Minor in FinTech

Aug 2022 – May 2026

Orlando, FL

- GPA: 3.952; National Merit Scholar; UCF Burnett Honors Scholar

TECHNICAL SKILLS

Skills: Agile | Apache | AWS | Backend | Bash | C | C++ | C# | CDN | CI/CD | Clerk | Cloud Infrastructure | CSS | Django | Docker | Eclipse | Excel | Express | Figma | Flask | Frontend | Full Stack | GCP | Git | Go | HTML | Java | JavaScript | JavaScript | Jira | Kafka | Linux | MATLAB | MySQL | Next | Node | NoSQL | Pandas | PHP | PostgreSQL | Postman | PyQt | Python | Qt | React | Rest APIs | Spring | SQL | Swift | Tailwind | TypeScript | Unix | Webpack
